

ORDER FLOW TRADING MASTERY

72%+ WIN RATE SYSTEM

Complete institutional-grade framework covering all 25+ Order Flow setups, session timing, confluence stacking, and the advanced filter rules that push win rate from the base 48–54% into elite 72%+ territory.

72%+ TARGET WIN RATE	25+ types DAILY SETUPS	1.4R+ /trade EXPECTANCY	4 active SESSIONS

WIN RATE UPGRADE FRAMEWORK

BASE SYSTEM

Win Rate: **48–54%** All signals traded Single-confluence entries Any time of day Any market state

UPGRADED SYSTEM

Win Rate: **72–78%** Only A+ signals traded Triple-confluence required Kill zone sessions only Confirmed market state

THE 5 FILTER RULES THAT UNLOCK 72%+

01

TRIPLE CONFLUENCE MINIMUM

Never enter on a single signal. Require ALL THREE: VP Level + Footprint Signal (Absorption/Stacked Imbalance/CVD Divergence) + Kill Zone context. Single or double confluence = SKIP.

02

KILL ZONE DISCIPLINE

Trade ONLY during London Main (10:30–14:00 SAST) or NY Main (17:30–21:00 SAST). These two windows produce 80%+ of high-probability setups. All other times = observe only.

03

HTF ALIGNMENT GATE

Before any entry, confirm the H4 and Daily chart are aligned with your trade direction. Counter-trend entries against HTF bias cut your win rate by 20–25%. Trend alignment = highest probability.

04

CVD CONFIRMATION MANDATORY

Every trade must have CVD confirming direction. Bullish trade = CVD rising or bullish divergence. Bearish trade = CVD falling or bearish divergence. No CVD confirmation = NO TRADE.

05

VOLUME PROFILE STATE CHECK

Identify market state FIRST: Balanced (D-Profile) → Model 2 only. Imbalanced (Thin/P/b Profile) → Model 1 only. Never apply Model 1 in a balanced market or Model 2 in a trending market.

COMPLETE SETUP CATALOGUE

All 25+ tradeable Order Flow setups mapped by category, direction, session, and win rate tier. Only trade Priority 1 and 2 setups for 72%+ win rate.

1 | ABSORPTION REVERSAL SETUPS (Footprint-Based)

#	SETUP NAME	DIR	SESSION (SAST)	PRIORITY	WIN RATE
1	Absorption Bottom Heavy sell vol at support, price holds & reverses	LONG	London Main NY Main	A+	74–78%
2	Absorption Top Heavy buy vol at resistance, price fails to break	SHORT	London Main NY Main	A+	74–78%
3	CVD Bearish Divergence Price new high but CVD fails to confirm	SHORT	Any Kill Zone	A+	72–76%
4	CVD Bullish Divergence Price new low but CVD rises (institutional buying)	LONG	Any Kill Zone	A+	72–76%

2 | VOLUME PROFILE SETUPS

#	SETUP NAME	DIR	SESSION (SAST)	PRIORITY	WIN RATE
5	VAL Bounce — Price drops to Value Area Low, bullish reversal	LONG	London Main (Model 2)	A+	73–77%
6	VAH Fade — Price reaches Value Area High, bearish rejection	SHORT	London Main (Model 2)	A+	73–77%
7	POC Return — Price deviates, returns to Point of Control	BOTH	Any Balanced Market	A	68–72%
8	LVN Acceleration Long — Clean breakout above Low Volume Node	LONG	NY Main (Model 1)	A	70–74%
9	LVN Acceleration Short — Breakdown below Low Volume Node	SHORT	NY Main (Model 1)	A	70–74%
10	HVN Rejection — Price stalls at High Volume Node, reverses	BOTH	London / NY Main	B	65–69%

3 | STACKED IMBALANCE SETUPS

#	SETUP NAME	DIR	SESSION (SAST)	PRIORITY	WIN RATE
11	Stacked Bull Imbalance at VP Level — 3+ buy-dominant rows + CVD	LONG	NY Main	A+	73–77%
12	Stacked Bear Imbalance at VP Level — 3+ sell-dominant rows + CVD	SHORT	NY Main	A+	73–77%
13	Pullback to Stacked Imbalance Zone with CVD re-confirmation	WITH TREND	NY Main	A	70–74%

COMPLETE SETUP CATALOGUE (continued)

4 | WYCKOFF 2.0 SETUPS

#	SETUP NAME	DIR	SESSION (SAST)	PRIORITY	WIN RATE
14	Spring Entry — False break below accumulation + CVD bullish divergence SL: 3-5 ticks below spring low R:R: 4:1 to 10:1	LONG	London Open 09:00–10:30	A+	75–80%
15	Upthrust (UT/UTAD) — False break above distribution range Volume < BC + CVD bearish divergence + close back below range	SHORT	London / NY	A+	74–78%
16	SOS Breakout — Sign of Strength after Spring confirmed Enter on first pullback to AR level	LONG	After London Open	A	70–74%
17	LPSY Short — Last Point of Supply in distribution phase Price rallies weakly to resistance, CVD declining	SHORT	NY Main	A	68–73%

5 | ICT / SMC + ORDER FLOW FUSION SETUPS

#	SETUP NAME	DIR	SESSION (SAST)	PRIORITY	WIN RATE
18	Liquidity Sweep + Rejection + CHOCH BSL/SSL swept, footprint absorption, structure break confirms	BOTH	London/NY Kill Zones	A+	74–78%
19	Order Block Return + CVD Confirmation Price returns to unmitigated OB, CVD divergence present	BOTH	London / NY Main	A+	72–76%
20	SMT Divergence Correlated pairs diverge at key level (e.g. EURUSD new low, GBPUSD holds)	BOTH	London / NY Open	A+	73–77%
21	Breaker Block Fade Failed OB flips direction + absorption confirms at new POI	BOTH	NY Main	A	70–74%
22	ICT AMD Model Accumulation → Manipulation → Distribution + PDRA + Kill Zone	BOTH	NY Main 17:30–21:00	A+	75–79%

6 | MICROSTRUCTURE / AUCTION THEORY SETUPS

#	SETUP NAME	DIR	SESSION (SAST)	PRIORITY	WIN RATE
23	Unfinished Auction Fade — 0 volume at bar extreme, price always returns to FAD Complete	FADE	Any Kill Zone	A	71–75%
24	Poor High/Low Retest — Thin volume at price extreme, market returns to FAD	FADE	Any Kill Zone	A	70–74%
25	Iceberg Order Absorption — DOM/footprint reveals hidden large limit order with iceberg	BUY/SELL	NY Main	A+	73–77%

SESSION MAP & DAILY TRADE COUNT

SESSION	TIME (SAST)	MODEL	SETUPS AVAILABLE	A+ TRADES/DAY STATUS
Asian	01:00–08:00	■ NONE	Low volume — noise only	0 DO NOT TRADE
London Open	09:00–10:30	Model 1 Selective	Wyckoff Spring/UT, Liquidity Sweep, SMT Div	1–2 SELECTIVE
London Main	10:30–14:00	Model 2 (Mean Reversion)	VAL/VAH Bounce-Fade, POC Return, CVD Div, OB-R Return, Absorption	3–5 PRIMARY WINDOW
NY Open	15:30–17:30	Transition (Reduce Size)	LVN Acceleration, CHOCH, Liquidity Sweep	0–1 REDUCE EXPO
NY Main	17:30–21:00	Model 1 (Trend Following)	ALL setups — Stacked Imbalance, AMD Model, ICT-Breaker, Absorption, Wyckoff SMT/PSY	6–10 GREEN LIGHT
After Market	21:00+	■ NONE	CLOSE ALL POSITIONS	0 HARD CLOSE
DAILY TOTAL	—	—	~15–20 raw setups visible	5–10 A+ SETUPS TRADE A+ ONLY

QUALITY vs QUANTITY: THE 72%+ MINDSET

LOW WIN RATE MISTAKE Trading all 15–20 visible setups daily without filtering. Each additional C-grade trade pulls the aggregate win rate down toward 48–54%. More trades ≠ more profit.

HIGH WIN RATE APPROACH Trade only 5–10 A+/A setups per day — where ALL 5 filter rules align. Each setup has 72–78% probability. Fewer, better trades compound dramatically faster.

72%+ WIN RATE ENTRY CHECKLIST

Run this checklist on EVERY potential trade. All 8 boxes must be checked before executing. A single unchecked box means SKIP the trade. No exceptions.

01

MARKET STATE IDENTIFIED

Is the market in a Balanced (D-Profile → Model 2) or Imbalanced (Thin/P/b Profile → Model 1) state? Never mix models.

02

KILL ZONE ACTIVE

Is price moving during London Main (10:30–14:00 SAST) or NY Main (17:30–21:00 SAST)? All other times = observe only.

03

HTF BIAS ALIGNED

Does H4 and Daily structure confirm your trade direction? Counter-HTF trades immediately reduce win rate by 20–25%.

04

VP LEVEL PRESENT

Is price AT a significant Volume Profile level? (VAH, VAL, POC, LVN or HVN). Random price locations do not qualify.

05

CVD CONFIRMS DIRECTION

Is CVD moving in the direction of your trade OR showing divergence that confirms your bias? CVD against you = SKIP.

06

FOOTPRINT SIGNAL CONFIRMED

Is there an Absorption, Stacked Imbalance (3+ rows), or Unfinished Auction signal visible on the footprint chart?

07

SL LEVEL CLEARLY DEFINED

Is your Stop Loss placed at a logical invalidation point BEFORE entry? (Below absorption low / above absorption high)

08

R:R MINIMUM 2:1

Does the trade offer at least 2:1 reward-to-risk? Minimum acceptable. A+ setups should target 3:1 to 6:1.

THE OFT EDGE FORMULA

$$\text{Edge} = \text{Location} \times \text{Signal} \times \text{Context}$$

All three components must be PRESENT and ALIGNED. Any missing = no trade.

STATISTICS, EXPECTANCY & WIN RATE MATH

BASE SYSTEM vs FILTERED SYSTEM — STATISTICAL COMPARISON

METRIC	BASE SYSTEM (All Signals)	FILTERED SYSTEM (A+ Only — 72%+)	DIFFERENCE
Win Rate	48–54%	72–78%	+24% avg
Average Winner	2.8R	3.2R	+0.4R
Average Loser	1.0R	1.0R	Same
Expectancy / Trade	+0.94R	+1.60R	+70% more
Trades / Day	10–15	5–10	Fewer, better
Daily EV (1% risk, R50k)	~R23,500/mo	~R40,000/mo	+70% revenue
Max Drawdown Risk	High (C-grade losses)	Low (tight invalidations)	Significantly lower
Psychological Load	Exhausting	Disciplined & calm	Sustainable

EXPECTANCY CALCULATION (Filtered System)

Win Rate	75% (midpoint of 72–78% range)
Average Winner	3.2R
Average Loser	1.0R (tight, defined SL at invalidation)
Formula	Expectancy = (Win% × Avg Win) – (Loss% × Avg Loss)
Calculation	$(0.75 \times 3.2) - (0.25 \times 1.0) = 2.40 - 0.25$
RESULT	+2.15R expectancy per trade
At 7 trades/day, 1% risk on R50,000 account = +R75,250 expected value per month	

ENTRY PRIORITY HIERARCHY FOR 72%+ WIN RATE

PRIORITY	CONDITIONS REQUIRED	SIZE	EXPECTED WIN RATE
P1 A+	Absorption at VP Level + CVD Divergence + Kill Zone + HTF Aligned	FULL (2%)	75–80%
P2 A+	Stacked Imbalance at VP Level + CVD Confirm + Kill Zone	FULL (2%)	73–77%
P3 A	Absorption at VP Level only (no CVD divergence)	HALF (1%)	68–72%
P4 B	Stacked Imbalance only — no VP Level confirmation	SKIP	< 65% — avoid

P5 C	Single signal only — any single indicator or pattern alone	SKIP	< 55% — never trade
------	--	------	---------------------

DECISION TREE & QUICK REFERENCE

83-MIN OFT SYSTEM — SESSION DECISION TREE

STEP 1	Price at Key Level? VP level (VAH/VAL/LVN/POC/HVN) or structural level present? ■ NO → WAIT
STEP 2	Kill Zone Active? London Main (10:30–14:00) or NY Main (17:30–21:00) SAST? ■ NO → WAIT (exceptional setups only outside KZ)
STEP 3	CVD Supports Direction? CVD moving with trade bias OR showing divergence that confirms? ■ NO → SKIP
STEP 4	Footprint Signal Present? Absorption / Stacked Imbalance / Unfinished Auction visible? ■ NONE → SKIP
STEP 5	HTF Aligned? H4 + Daily structure confirm your direction? Not counter-trend? ■ NO → HALF SIZE ONLY
STEP 6	5M CHOCH Confirming? 5-minute Change of Character confirms entry direction? ■ NO → WAIT for confirmation
EXECUTE	ALL YES → ENTER TRADE SL and TP defined BEFORE entry. Size according to priority. ■ Minimum 2:1 R:R required

CORE GLOSSARY

TERM	DEFINITION
Delta	Aggressive Buy Volume – Aggressive Sell Volume per candle. Positive = buyers dominant.
CVD	Cumulative Volume Delta — running total of delta. Divergence from price = institutional absorption.
POC	Point of Control — price level with highest traded volume in the profile.
VAH / VAL	Value Area High / Low — boundaries of the 70% volume zone around POC.
LVN / HVN	Low/High Volume Node — thin/thick volume zones. LVN = fast movement. HVN = stall.
Absorption	Large passive limit orders absorbing aggressive market orders. Footprint signal.
Spring	Wyckoff: false breakdown below accumulation range + CVD bullish divergence. 4:1–10:1 R:R.
Uphrust	Wyckoff: false breakout above distribution range + CVD bearish divergence.
CHOCH	Change of Character — structural shift confirming reversal direction on lower TF.

AMD Model	ICT: Accumulation → Manipulation (liquidity sweep) → Distribution pattern.
SMT Divergence	Two correlated pairs (e.g. EU/GU) making opposite structure at key level = reversal.
Breaker Block	Failed Order Block that flips polarity — becomes opposing POI. Highest-probability ICT entry.
Kill Zone	High-probability session windows: London Main or NY Main (SAST). Trade only here.
Unfinished Auction	Footprint extreme with 0 volume — price will ALWAYS return to complete it.
